- #81522**      **Front Left Upper & Lower A-arms for the ARRMA Kraton 8S & Outcast 8S**  
UPC #672415815229
- #81562**      **Front Right Upper & Lower A-arms for the ARRMA Kraton 8S & Outcast 8S**  
UPC #672415815625

The ARRMA Kraton 8S & Outcast 8S are 26 lbs. (12kg.) of high-flying, dirt shredding, jump-killing fun! If your A-arms aren't up to the abuse these massive monsters can dish out, look no further than **RPM**. Our replacement front A-arms are designed with the backyard basher in mind and can handle some serious abuse and come back for more.

Our lower A-arms have a triple beam style construction designed to spread impact energy across all three beams. Each beam's cross-section is a whopping 5/8" (15.8mm) tall x 3/8" (9.5mm) wide. These massive beams reduce unwanted flex during normal suspension movement, yet allow impact-absorption during those not-so-perfect landings and crashes. We also moved the inner cross brace away from the chassis, eliminating the droop stop entirely. While this may seem counter-intuitive, our test truck's chassis was bent at the droop stops, clearly illustrating that extreme impacts were too much for the chassis plate to handle. After all, there's nothing worse than a bent chassis.

Our upper A-arms use a dual beam construction where each beam is a massive 1/2" (12.7mm) tall x 3/8" (9.5mm) wide. We eliminated the tube shape over the hinge pin to eliminate built-in molding stresses while beefing up the leading edge hinge pin support to add some much needed strength and durability.

Both upper and lower A-arms are molded with fingernail slots that allow easy access to remove the aluminum support ring (not included) at the pivot ball. **Made in the USA** from our trademark blend of ultra durable materials, you can't go wrong with **RPM**!

**Tech Notes:** **RPM** A-arms for the ARRMA Kraton 8S & Outcast 8S are sold as one upper and one lower in each kit. One left (#81522) & one right (#81562) will be needed to complete the front end of one vehicle. **RPM** A-arms replace the upper A-arms from stock ARRMA #ARA330561 and the lower A-arms from stock #ARA330589.

**Installation Notes:** Like stock A-arms, **RPM** Kraton 8S & Outcast 8S versions are sold without threads. If the pivot ball hole is difficult to thread using the pivot ball, **RPM** recommends thread tapping (tap not included) the hole for 3 or 4 threads, but do not tap any further. Additional cut threads will negate the thread-locking capability of our materials.
