- #70795** **Blue**
UPC #672415707951

RPM Front & Rear Upper Chassis and Differential Covers for the LaTrax Teton and Rally are designed for strength! Customers reported that the stock differential cover pivot ball mounts repeatedly break off. This is because the stock upper chassis is routed through the narrow groove between the pivot ball mount and differential bulge of the differential cover, leaving little support for that mount. Our solution? We rerouted the upper chassis plates around the outside of the pivot ball mounts. With the upper chassis out of the way, we linked the pivot ball mount directly into the differential bulge. With a direct tie in, the extra support provides a much needed boost in strength and durability.

RPM Front & Rear Upper Chassis and Differential Covers are backed by a limited lifetime breakage warranty. For strength you can count on and durability that lasts, look no further than **RPM**.

Tech Notes: **RPM** Front & Rear Upper Chassis and Differential Covers for the LaTrax Teton and Rally partially replace stock LaTrax #7523 & #7530. Each kit includes one front and one rear differential cover, and one front and one rear upper chassis. Caution: **RPM** #70792 & #70795 are not compatible with the LaTrax SST or Prerunner.
