Front A-arms for the 4S v2 ARRMA Kraton & Outcast

#81682 **Front A-arms for the 4S v2 ARRMA Kraton & Outcast**
UPC #672415816820

RPM Front A-arms for the 4S v2 ARRMA Kraton & Outcast are designed primary for strength and durability but we've added a few extra features in as well.

First is slop elimination. Our Front A-arms reduce the amount of movement of the A-arm at the hinge pins, providing for better steering response and more consistent camber, caster and toe angle settings.

Our next improvement is the addition of a second shock mount hole further out on the arm, providing for a lower profile suspension set-up. This shock position allows the suspension to lay down a little further, dropping the ride height for a lower center of gravity and better cornering stability.

Our most important update is durability. Our new A-arms are massive and uniform in thickness across their entire length! All **RPM** A-arms are molded from our ultra tough blend of engineering grade nylons for performance you can rely on when conditions are at their worst!

Tech Notes: **RPM** Front A-arms for 4S v2 versions of the ARRMA Kraton & Outcast are sold in pairs. Replaces stock ARRMA #ARA330711.
